Background

Conventional Phase Noise Measurement

- Expensive spectrum analyzer
- Long measurement time (~10seconds)

LSI mass production test

Significant test cost

Research Objective

Measurement the phase noise without using a spectrum analyzer

Delta-Sigma TDC (Time-to-Digital Converter)

- Good linearity
- Small circuitry
- Fine time resolution
- The phase noise frequency characteristics can be obtained by FFT

Low Cost & High Quality Test

Phase Noise

Ideal Phase-Locked Loop (PLL)

Actual Phase-Locked Loop (PLL)

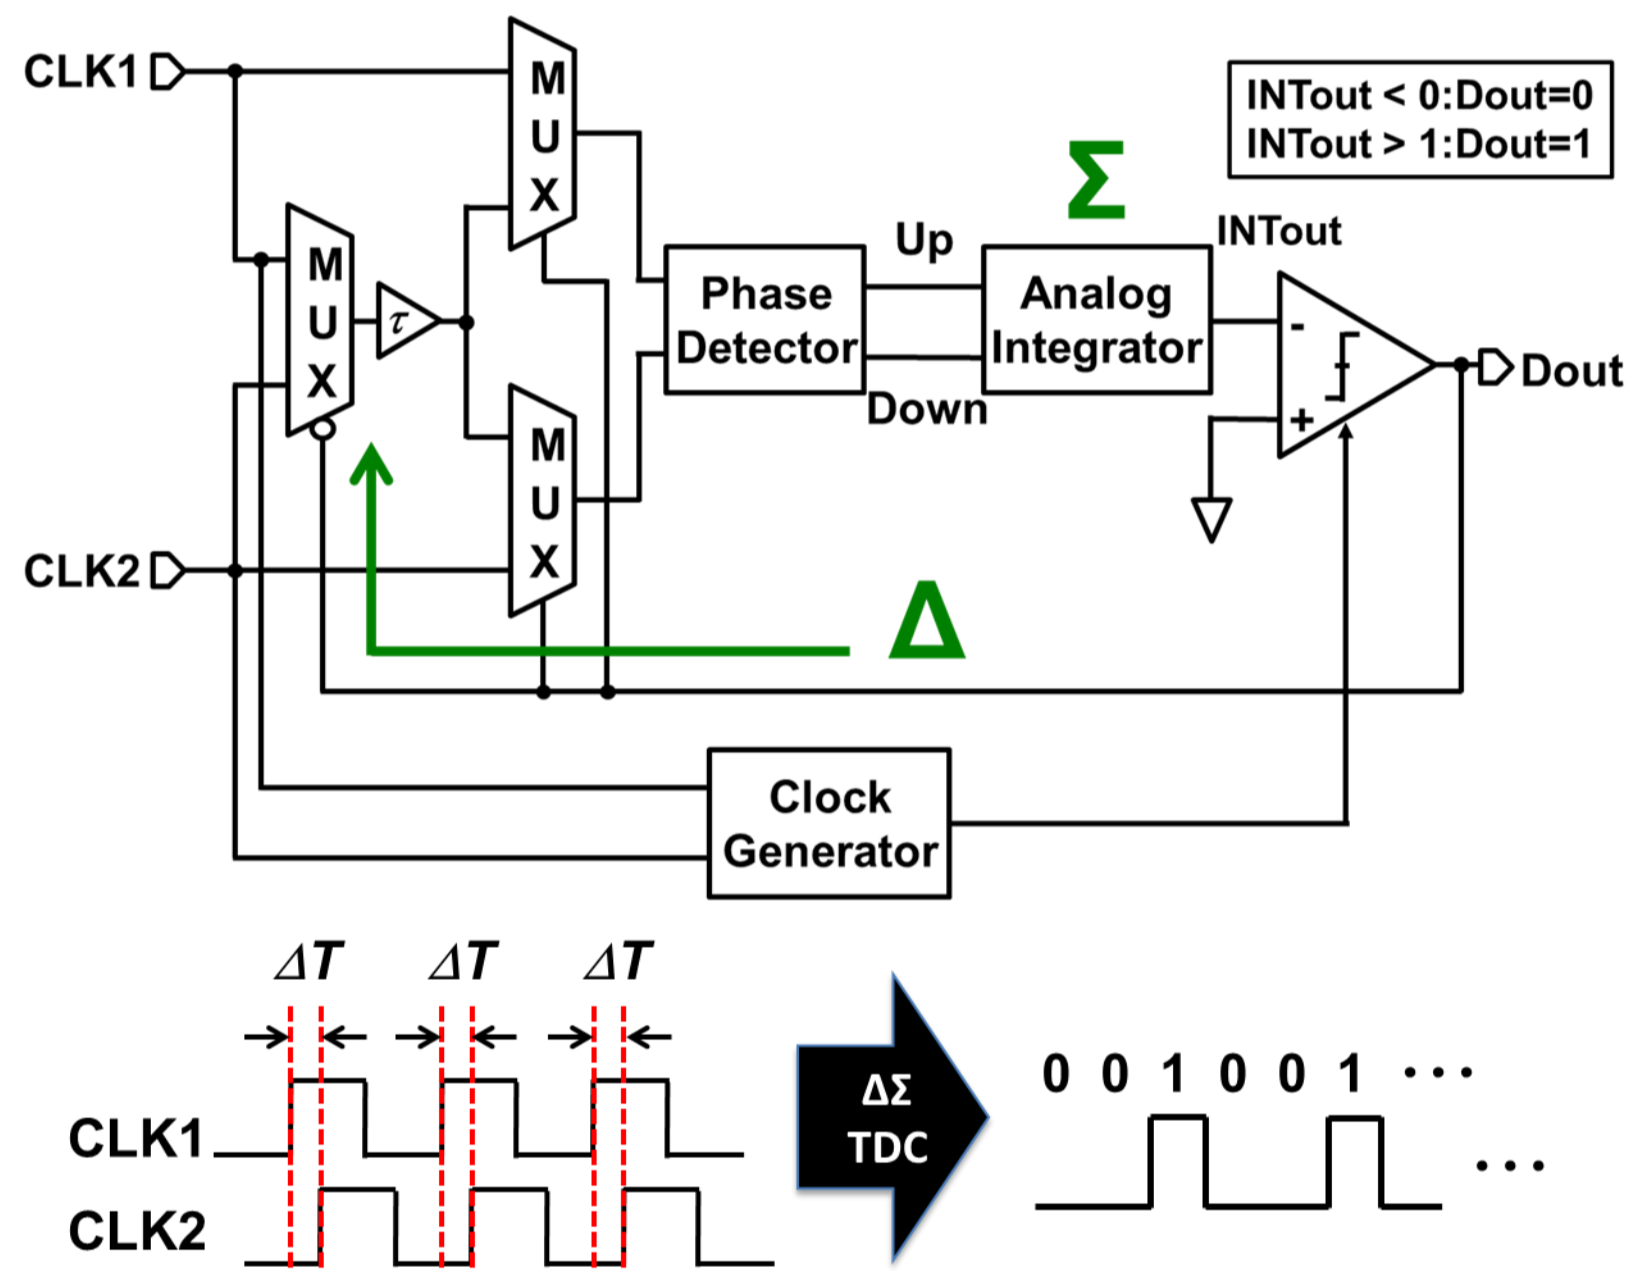

Phase Noise = Various frequencies

cause an error in the system

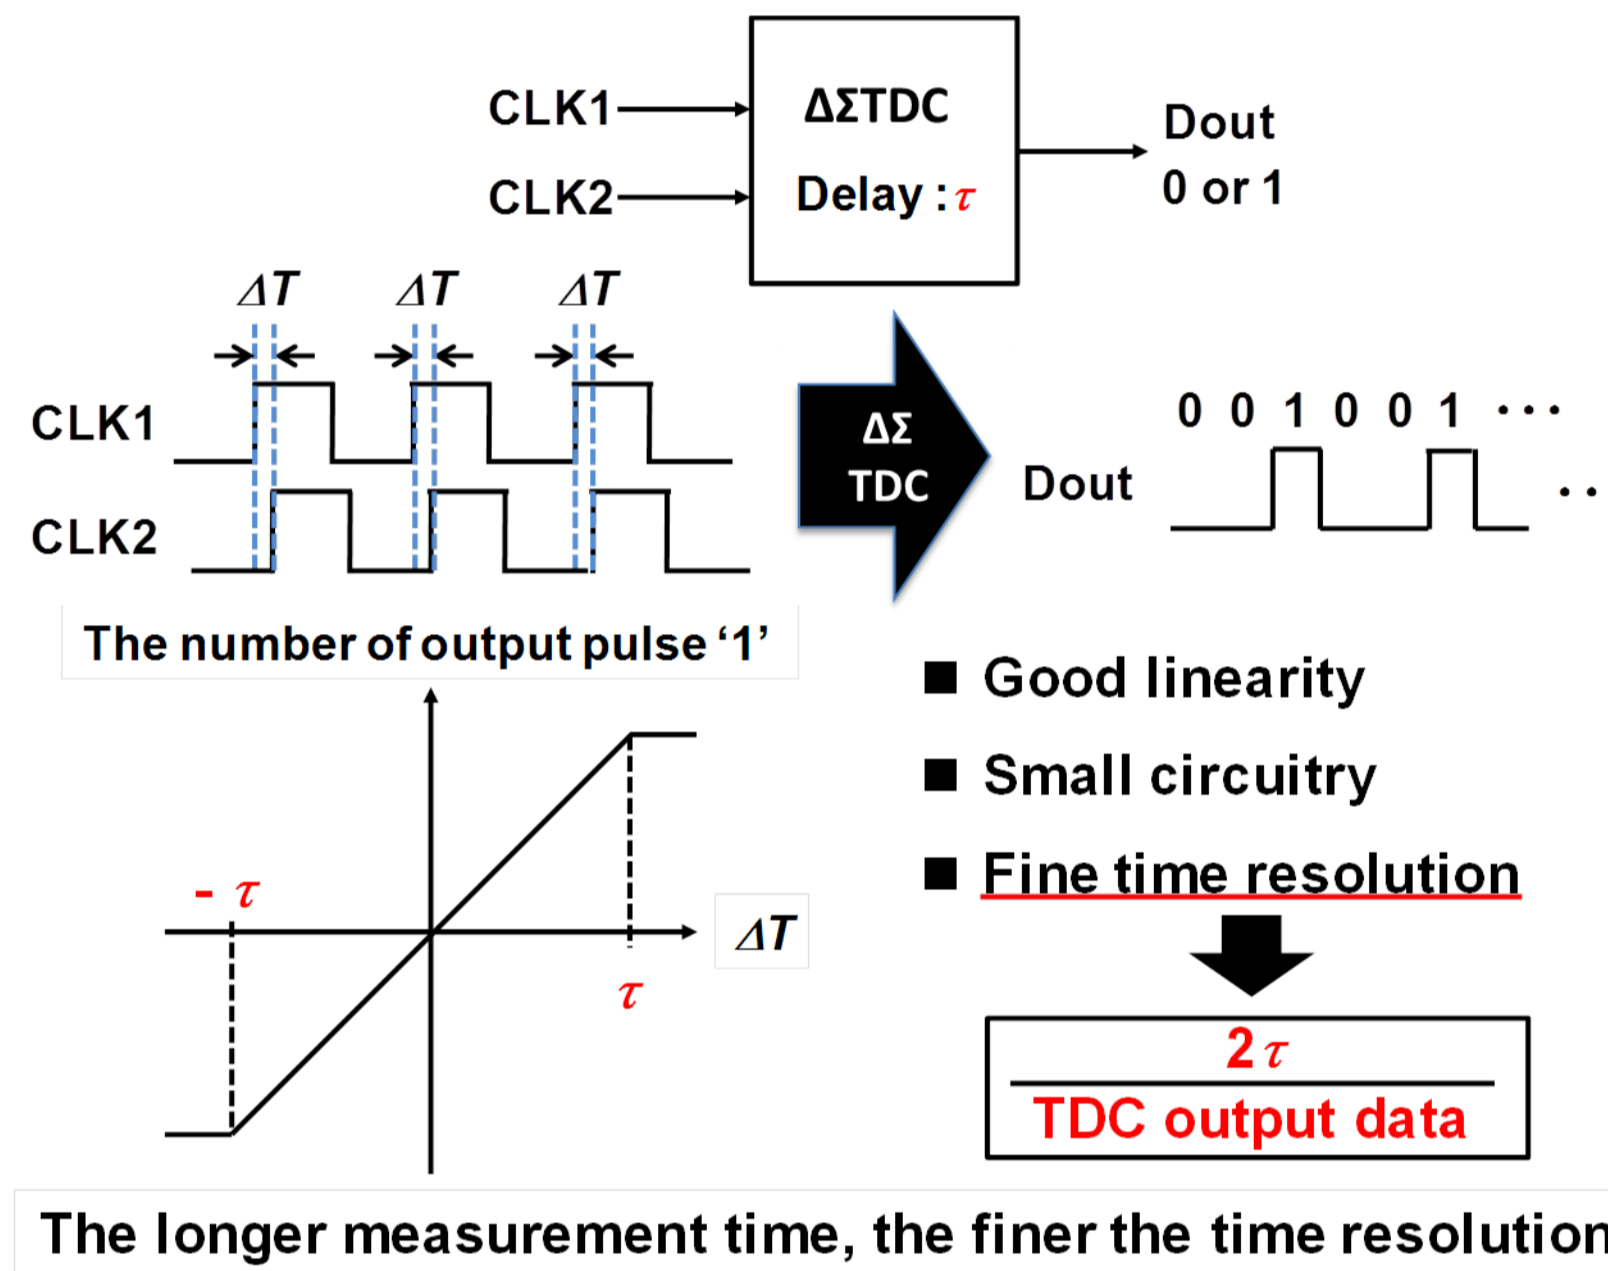

It is necessary to measure the noise amount

Introduction

Block Diagram of Delta-Sigma TDC

Principle of Delta-Sigma TDC

Principle of Phase Noise Measurement

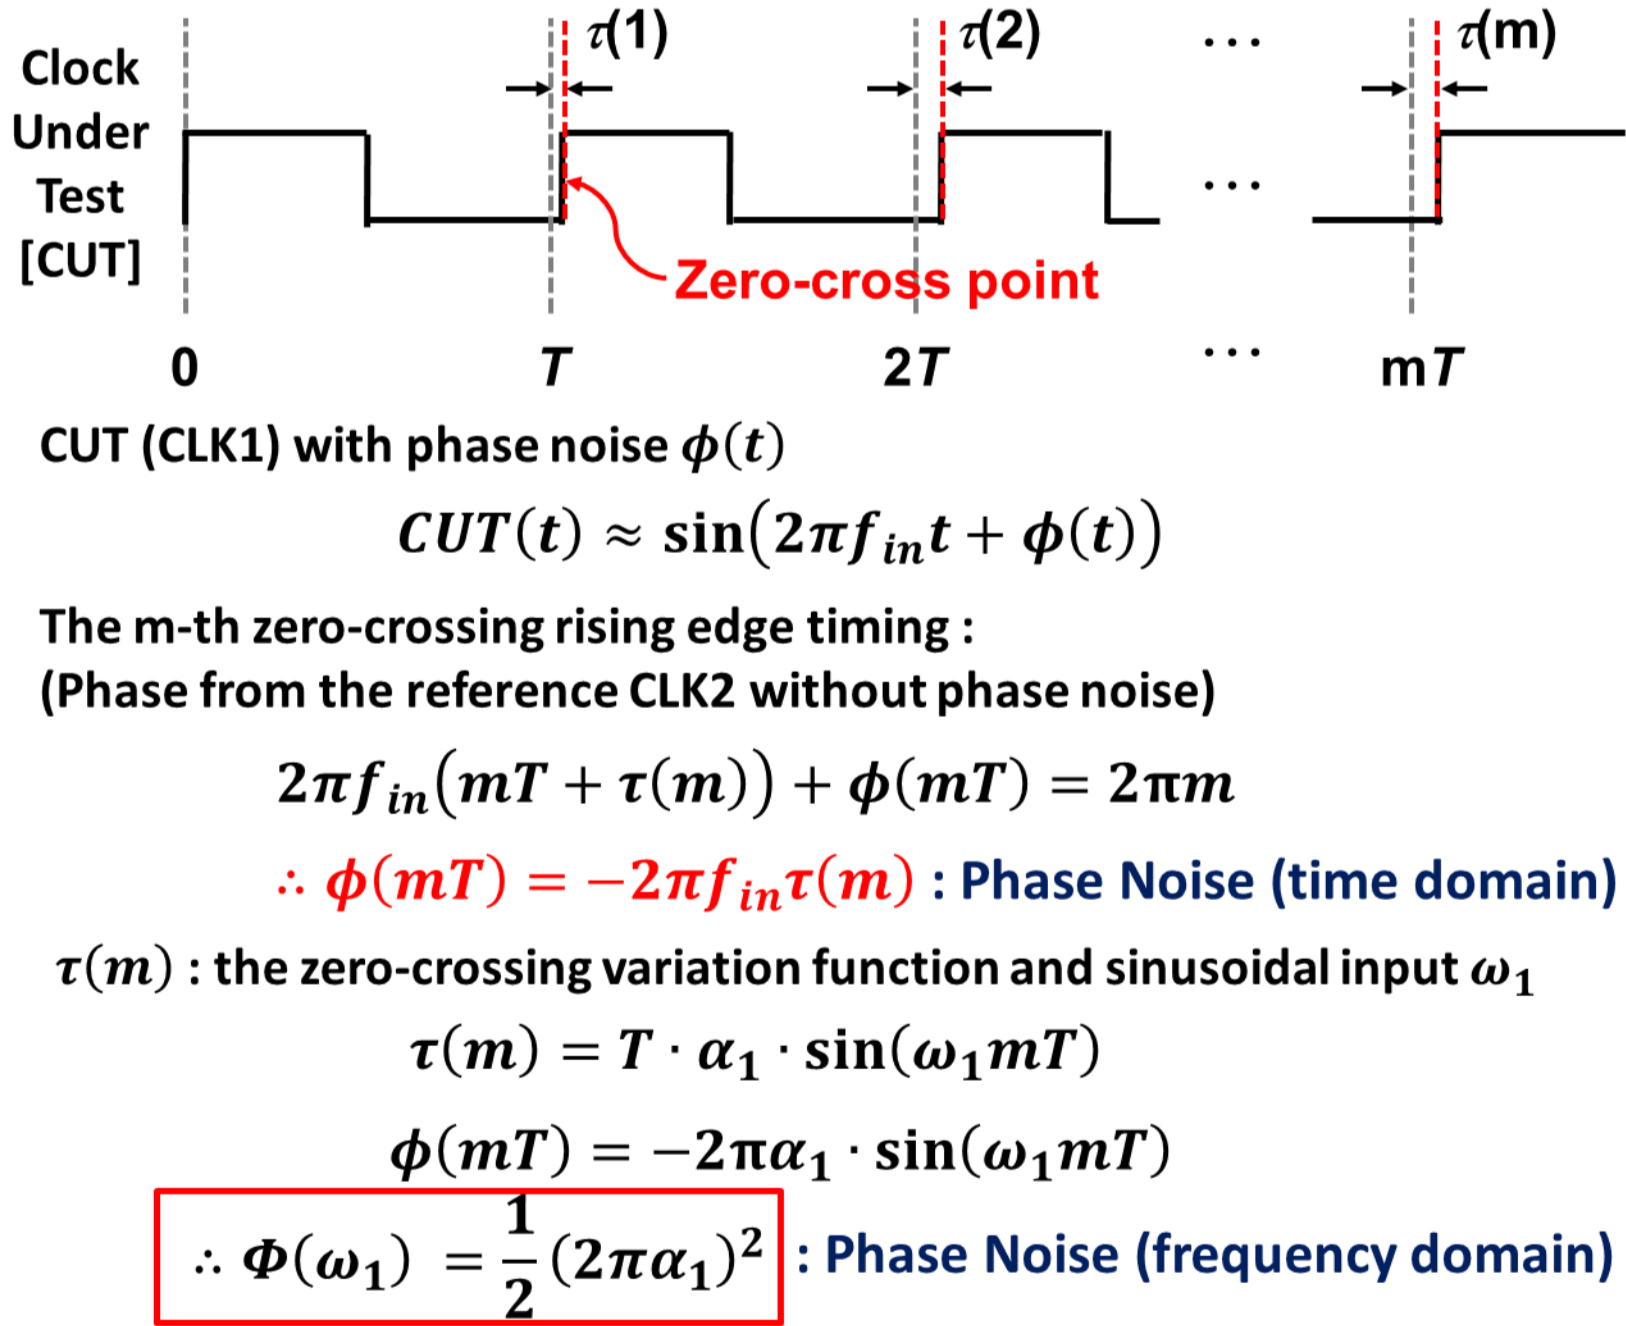

Without Phase Noise

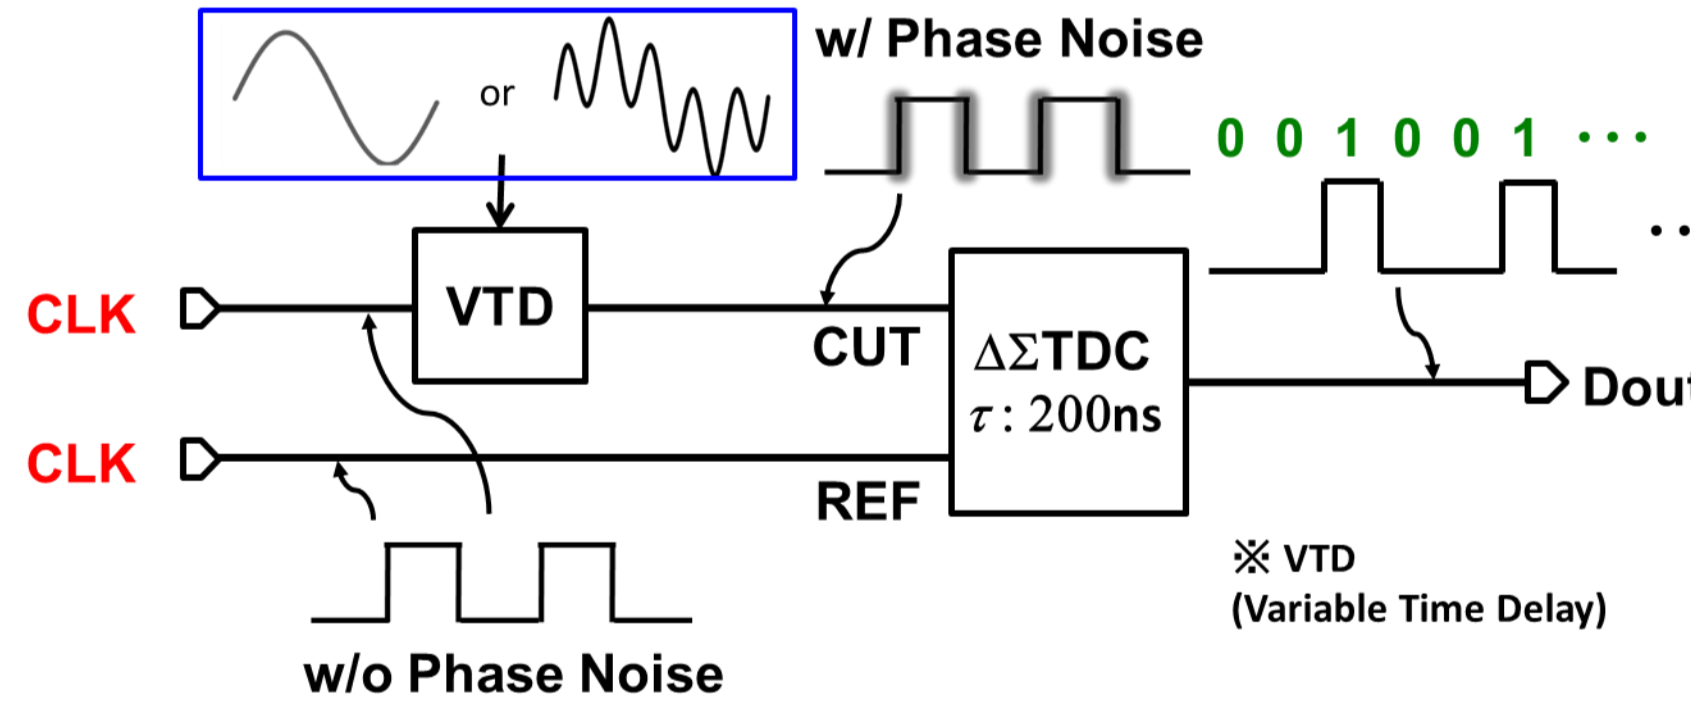

With Phase Noise

Analytical Discussion

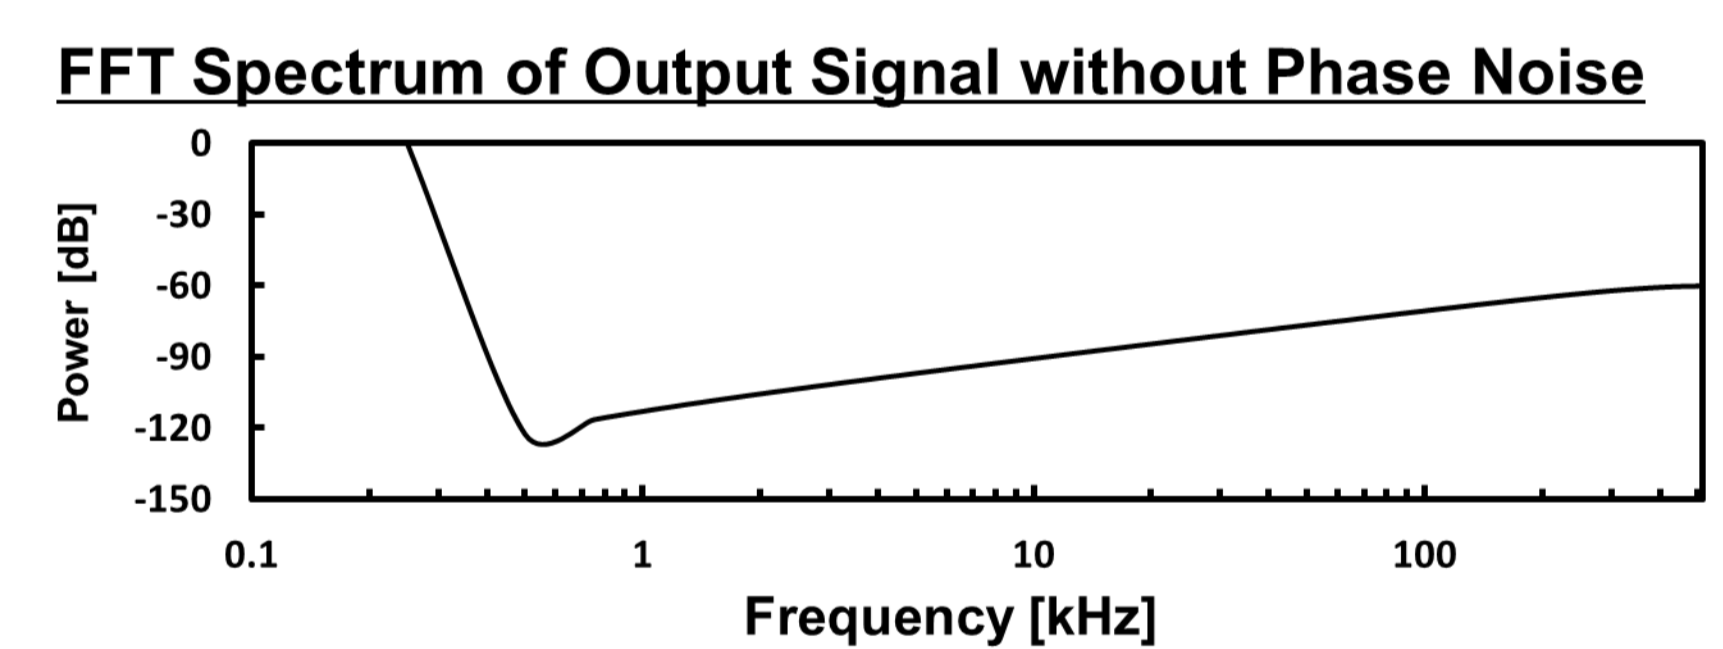

MATLAB Simulation

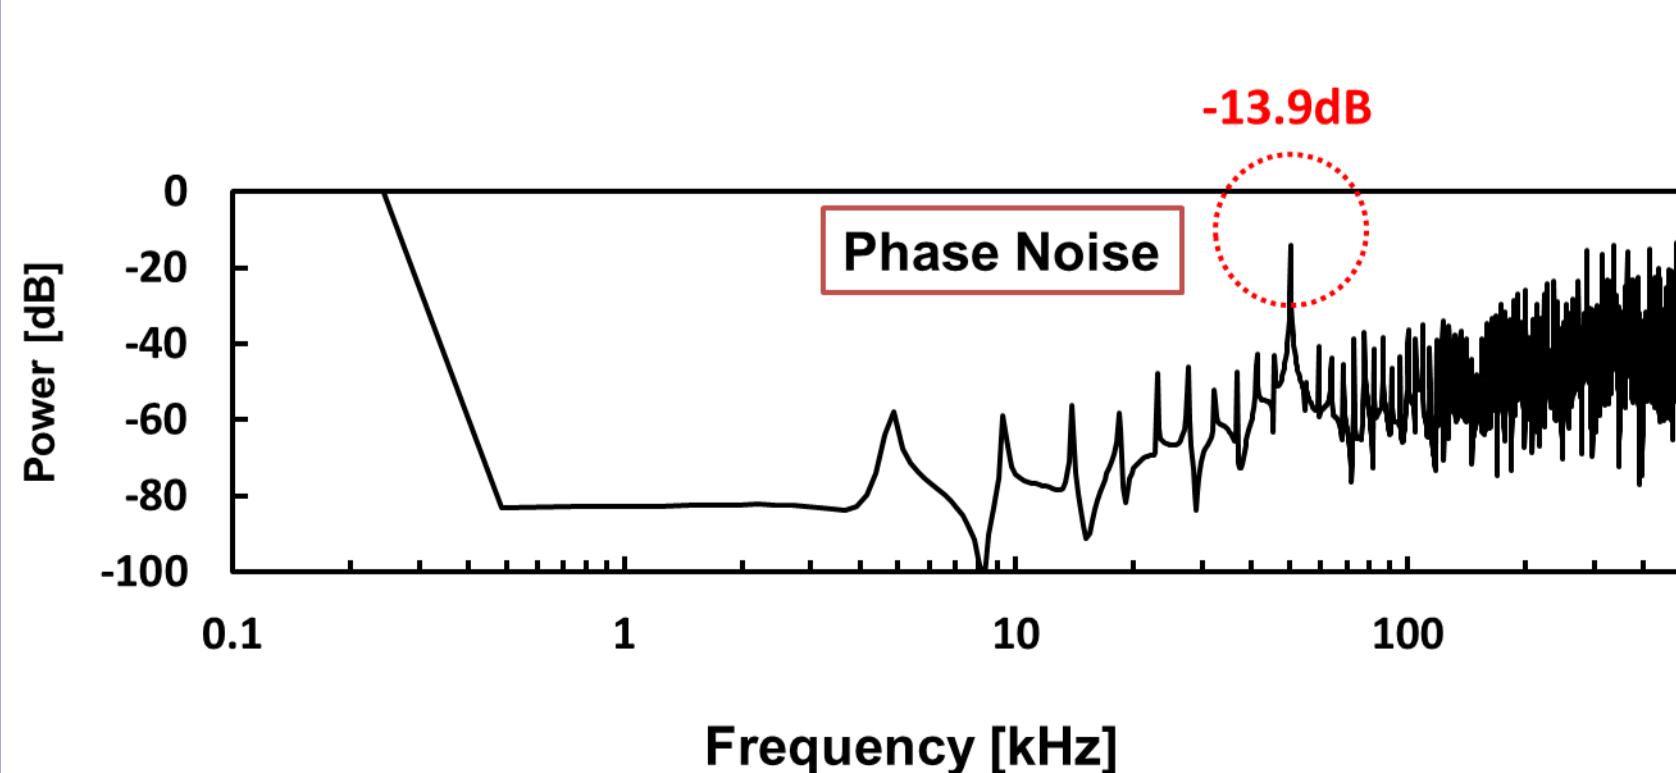

Simulation Conditions			
Case	I	II	III
Delay of ΔΣ TDC (τ)	200ns	200ns	200ns
Input frequency	1MHz	1MHz	1MHz
Phase variation of CUT	10kHz	50kHz	10kHz & 50kHz
The number of ΔΣ TDC (τ) data	4096	4096	4096

Simulation Result (I)

Simulation Result (II)

FFT Spectrum with Phase Noise at 50kHz

Simulation Result (III)

FFT Spectrum with Phase Noise at 10kHz and 50kHz

Single sinusoidal phase noise result

I . 10kHz	II . 50kHz
-13.7dB	-13.9dB

Well match

Linear superposition

Conclusion

- We have proposed a phase noise measurement technique for a clock using a delta-sigma TDC.
- We have verified effectiveness of the proposed method by MATLAB simulations.
- A multi-bit delta-sigma TDC with linearization techniques can further reduce the measurement time.
- Low cost and high quality phase noise test can be realized.

Phase Noise Measurement Technique & Simulation
